DETAILED ACTION

Claim Rejections - 35 USC § 102

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-41 are rejected under 35 U.S.C. 102(e) as being anticipated by Ishikawa et al.

Ishikawa et al. teaches a method and apparatus for attaching tags to medical and non-medical devices. Specifically a method and apparatus are taught for attaching one or more transponders to medical and non-medical products to tag respective ones of the product with identifying data contained in a memory of the transponder (abstract). Ishikawa et al. further teaches that the system is contained integrally within the structure of a micro spherical semiconductor serving for example as a temperature sensor (e.g. column 3; lines 40-45). Examiner notes that this represents a first tracking device attached to an item associated with a storage unit wherein the tracking unit device monitors a presences and a temperature of the item. Examiner also notes that Ishikawa et al. teaches a specific embodiment of the storage unit as an emergency room. However, the requirements are merely any physical barrier where items can be checked out (column 10; lines 20-48), clearly this represents a refrigerator, an incubator or a blood storage unit, especially since these all store medical devices.

Ishikawa et al. further teaches the data in the memory of the transponder is read by an external monitoring unit which provides power to and interrogates the transponder and displays or records the data read from the transponder (e.g. 4:63-5:5). Examiner notes that this represents a processing device electronically linked to the first tracking device that communicates with the tracking device.

Application/Control Number: 10/026,839 Page 3

Art Unit: 3627

Examiner further notes that the as the system taught by Ishikawa et al. includes medical devices and the storage unit includes an operating room it is therefore understood that an access control system exists, like ones in all operating rooms. Examiner notes that these systems include badge identification, retinal identification, and access logs. These are standard within operating facilities and storage units associated with medical devices, such as the ones disclosed by Ishikawa et al.

Conclusion

Applicant's arguments with respect to claims 1-41 have been considered but are moot in view of the new ground(s) of rejection.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
